

BLUEPARROTT + ZEBRA:

Enhance productivity for mobile workers with a hands-free Push-to-Talk experience

Voice communications are the best way for many mobile workers to collaborate; however, highly mobile workers tend to have their hands full most of the day. Together, BlueParrott and Zebra enable hands-free, heads-up communication to enhance productivity.

THE CHALLENGE

Grocery store associates, warehouse workers, delivery drivers, healthcare providers, first responders, utility technicians, and other highly mobile workers tend to have their hands full most of the day. So, having to pick up a mobile device to communicate with colleagues can prove difficult and even dangerous.

THE SOLUTION

Pair the power of Zebra mobile computers with BlueParrott Bluetooth headsets for a winning combination. **Zebra Workforce Connect Push-to-Talk Pro** allows users to turn their mobile devices into full-feature walkie talkies, enabling one-to-one and site-to-site group PTT and secure text messaging with in-transit encryption and multimedia support. **BlueParrott's Parrott Button™** will initiate PTT calls and text messaging with one touch. Additionally, all BlueParrott headsets are equipped with a broad connectivity range so employees can move about work areas while maintaining their connection and ensuring all calls adhere to security and compliance standards.

Equip your mobile teams with the communication and collaboration tools they need to ensure operational continuity and minimize downtime.
